Driving Towing

ON 1.8 front wheel drive (1.4 L- gas, 2.0L gas, and 1.6L diesel engine) and all-wheel drive (2.0L diesel engine) vehicles, use the following procedure:

For vehicles being towed, the vehicle should be towed at the beginning of each tow and attach RV tow stopper about five minutes. This will ensure proper lubrication of the front end components.

To tow the vehicle from the store with all four wheels on the ground:

1. Position the Equinox and secure it to the towing vehicle.

2. Start the engine.

3. If equipped with AWD, engage the AWD system and confirm that it is on.

4. Shift the transmission to N (Neutral).

5. Then, put the Equinox into Service Mode by pressing **ENGINE START/STOP** one time with the brake pedal applied. An amber light will appear in the bottom when in Service Mode.

The chime will ring continuously for 30 minutes. Leave the transmission in N (Neutral).

6. Turn off all accessories that are not needed.

It is important to change the battery of the towed vehicle during occasional vehicle towing.

Once the destination is reached:

1. Set the parking brake.

2. Shift the transmission to P (Park).

3. Turn the vehicle off.

4. Start the engine and let it idle for more than three minutes before driving the vehicle.

A plethora of new safety technology was also installed with the 2018 revamp such as a surround-view camera system and forward-collision warning. The 2018 versions also brought in an optional AWD system for the first time for the range though this was stopped in 2019 due to low demand.
